

HylaSAP™

A powerful, automated SAP fax connector for HylaFAX™

*HylaSAP™
enables SAP
users to automate
all manual faxing
activities*

Key Features

Ease of use

Users can fax any printable document directly from SAPoffice and receive faxes directly into their SAPoffice inboxes without ever having to know that a HylaFAX™ server was involved!

Seamless integration

HylaSAP™ is a powerful, robust implementation of SAPConnect, SAP's BC-CON integration scenario for faxing from their popular ERP system. Only minimal SAP configuration is required for deployment; no programming modifications to SAP or other core business processes are needed.

Immediate implementation

There is no delay in implementation of HylaSAP™ throughout the enterprise, and no user training is needed.

Saves time and money

The automation of faxing improves efficiency and reduces labor expenses.

Real-time status reporting

Email notification of delivery status eliminates the guesswork, either alerting users to failures or confirming successful delivery.

Multiple version and platform availability

We're proud to support the open source version of the HylaFAX™ software in addition to our own commercial version, HylaFAX™ Enterprise Edition, which has enhanced features and functionality. HylaSAP™ is fully supported on Red Hat and SuSE Linux and Solaris. For other platforms, please call 215.438.4638 option 1.

*HylaSAP™ is
powered by
HylaFAX™, an
enterprise-class fax
server for business-
critical faxing*
